Data protection: facing new challenges

GDPR implementation and FinTech challenges, Covid-19 pandemic and contact tracing applications, data-hungry platforms are some of the most relevant and discussed issues of the data-driven environment in which we live. They lead legal scholars and regulatory bodies to find adequate answers to these challenges and to draw future scenarios in data regulation.

Against this background, this roundtable seminar aims to provide an overview of these debated issues from a European perspective and in the light of global trends and international approaches in the field of data protection.

This webinar is part of the free public seminar programme
“Technology, Regulation and Society”
(Coordinator: Prof. Alessandro Mantelero).
